# InboxKit campaign strategy

17 October 2026 | Draft only | Goal: 15 qualified demos in 30 days

## Segment and buying signal

**Fit:** Founders, heads of growth, and infrastructure owners at agencies delivering client cold email or outbound systems.

**Signal:** Public evidence of client campaign delivery, sending volume, infrastructure setup, expansion, or a relevant hire. One first-party page can establish fit and activity. Record dates and uncertainty; operational relevance does not establish buying intent.

**Why this signal:** Strict hiring searches added five companies from 41 dispositions; strict recent named-client cases added none. We replaced the experimental 90-day cutoff with concrete operational evidence, keeping recency visible.

## Offer and single CTA

Show how InboxKit centralizes client accounts, provides a panel per domain, and automates SPF/DKIM/DMARC. Invite the buyer to **book a 30-minute demo**. Product evidence: agency dashboard, domain panels and DNS. Smartlead and Instantly are integrations. No delivery guarantees or invented savings.

## LinkedIn and email over three weeks

| Week | LinkedIn | Email |
|---|---|---|
| 1 | Day 1: connection. Day 4: follow-up 1. | Day 3: email 1A or 1B, with a sourced first line. |
| 2 | Day 10: follow-up 2. | Day 8: email 2. Day 14: email 3. |
| 3 | No further LinkedIn touch. | Day 20: final email. |

LinkedIn follow-ups require an accepted connection; day 4 also requires email 1 to have been sent. Stop both channels on any reply, meeting, or opt-out. Every email includes reply STOP. A monitored reply-to and operator suppression handling are required before live sending. All messages remain drafts.

## Volume math and assumptions

**Contacts needed = 15 / (positive reply rate x booking rate x attendance rate x qualification rate).** All rates are planning assumptions; contacts are rounded up.

| Scenario | Positive replies / contact | Booked / positive | Attended / booked | Qualified / attended | Contacts for 15 |
|---|---|---|---|---|---|
| Conservative | 0.10% | 25% | 75% | 75% | 106,667 |
| Base | 0.24% | 46% | 80% | 80% | 21,230 |
| Stretch | 0.50% | 50% | 85% | 85% | 8,305 |

Sales.co's October report provides context: 0.24% positive replies and 143 bookings from 124,513 contacts. Its offer differs; some bookings occurred after 30 days. These results do not establish an InboxKit forecast.

At base assumptions, **2,000 send-ready contacts imply about 1.4 qualified attended demos**. The 100-row sample cannot establish the 15-demo outcome. Start with a small approved pilot, measure replies, bookings, attendance, and qualification separately, then revise volume. See the 2,000-row cost note for data versus execution costs.

## Current staging

**100 distinct companies = 97 draft send-ready + 3 parked.** Eight alternate-domain relationships have public proof. Parked rows retain exact evidence gaps or conflicting verification. Accept-all flags stay separate from probabilistic provider verdicts. Individual email review.
