InboxKit campaign strategy

18 October 2026 | Draft only | Goal: 15 qualified demos booked in 30 days

Segment and buying signal

Fit: Founders, heads of growth, and infrastructure owners at agencies delivering client cold email or outbound systems.

Signal: Public evidence of client campaign delivery, sending volume, infrastructure setup, expansion, or a relevant hire. One first-party page can establish fit and activity. Record dates and uncertainty; operational relevance does not establish buying intent.

Why this signal: Strict hiring searches added five companies from 41 dispositions; strict recent named-client cases added none. We replaced the experimental 90-day cutoff with concrete operational evidence, keeping recency visible.

Offer and single CTA

Show how InboxKit centralizes client accounts, provides a panel per domain, and automates SPF/DKIM/DMARC. Invite the buyer to **book a 30-minute demo**. Product evidence: agency dashboard, domain panels and DNS. Smartlead and Instantly are integrations. No delivery guarantees or invented savings.

LinkedIn and email over three weeks

Week	LinkedIn	Email
1	Day 1: connection. Day 4: follow-up 1.	Day 3: email 1A or 1B, with a sourced first line.
2	Day 10: follow-up 2.	Day 8: email 2. Day 14: email 3.
3	No further LinkedIn touch.	Day 20: final email.

LinkedIn follow-ups require an accepted connection; day 4 also requires email 1 to have been sent. Stop both channels on any reply, meeting, or opt-out. Every email includes reply STOP. A monitored reply-to and operator suppression handling are required before live sending. All messages remain drafts.

Goal math and operating plan

Contacts needed = 15 / qualified-booking rate per unique contact. Count one eligible agency with a relevant buyer, confirmed infrastructure relevance and a scheduled demo once across both channels. Attendance is a separate downstream measure.

Planning sensitivity, not observed	Qualified bookings / contact	Contacts for 15
Lower yield	0.25%	6,000
Required for a 2,000-contact plan	0.75%	2,000
Higher yield	1.00%	1,500

Use the 97 staged draft-ready contacts as the first pilot; three remain parked. A conditional 2,000-contact rollout needs roughly 1,900 more accepted companies, up to 8,000 emails, and funded research/sending capacity. Launch remaining cohorts by day 10 so each day-20 touch fits inside day 30. Reserve manual LinkedIn for up to 100 priority buyers, subject to account allowance. Count each agency's booking once across channels.

0.75% is a target-implied hurdle, not a forecast. The feasibility note explains external benchmark limits and a 480-email peak day. Validate segment depth, sourcing pace, sender readiness, capacity and reply handling before rollout; otherwise reduce volume and report the target risk. See scaling and cost and the three parked cases.
